

Abstract

A goods conveyance mechanism having the function of displaying the course of an order carried from a goods supplying place to a goods receiving place by use of a gradually changing image in the goods receiving place. The goods conveyance mechanism includes carrying means for carrying goods from a goods supplying place to a goods receiving place; image display means provided in the goods receiving place; and control means for allowing an image displayed on the image display means to change one after another in accordance with developments of the goods carried up to the goods receiving place by the carrying means.
